

**Fully Synthetic Racing 4T  
Supplied by United Oil**

**Application: Drag Racing  
Location: Various facilities around Australia**

**Vehicle: Kawasaki ZZR Funnybike  
Motor: Kawasaki 1425J**

Dear Sir

**RE: United Oil Racing 4T**

Ballistic Drag Racing Team has been using United Oil for the past 12 months. Drag Racing engines are put under extreme load, particularly our ZZR Funnybike which is powered by Nitrous Oxide. This engine is revved to 11,000 rpm each time we make a run down the quarter mile. Over the period of time that Racing 4T has been used in this vehicle we have had no problems with wear on the wrist pins, gearbox shafts and cams. Also we have noticed that we have achieved more consistency with our clutch tune up, which we contribute to the use of United Oil 4T. From our point of view the product is great.

Thanks United Oil.

Regards

Rob Cassar  
Principal  
Ballistic Drag Racing Team
